

# Nextlink Mini Towers

**Mini Towers** are a great way to connect to Nextlink's Wireless Internet service when you need additional height for your antenna to have a clear line of sight to our tower.

Available heights starting at 40'

Minimally invasive concrete pad base

Bracketed and Stand Alone tower options available

**Pricing starts at just \$1,999!**

Financing available if you prefer to pay over time

## Step 1: Build a Base

The average size of the concrete base will be 2'x2' but may vary slightly depending on the height of the tower. Once the base is built, the concrete will need to fully cure before we can come back and stand your tower.

## Step 2: Stand the Tower

Depending on the height and location of your tower, it will either be bracketed to the side of an existing structure, or it may stand on its own. Once the tower is stood up, we will attach the necessary equipment for you to receive wireless internet connectivity to your home or business.
